

STUDENT MANAGEMENT SYSTEM

WHAT IT IS

A Student Management System is a software application used to manage student data efficiently.

Helps institutions handle:

- Student records
- Attendance
- Marks & performance

Reduces manual work and improves accuracy

PROBLEM STATEMENT

- Manual record keeping is:
 - Time-consuming
 - Error-prone
 - Difficult to manage at scale
- Need a centralized system to:
 - Store student data
 - Access information quickly
 - Improve workflow

The background of the slide features abstract, flowing, metallic-looking shapes in shades of blue and white against a solid black background. These shapes are positioned on the left and right sides, framing the central text.

OBJECTIVES

Build a web-based application to:

- Store student details securely
- Provide CRUD operations (Create, Read, Update, Delete)
- Track attendance and marks

Improve:

- Data accuracy
- Accessibility
- Performance

TECHNOLOGIES USED

- Frontend: React / HTML / CSS
- Backend: Django
- Database: MySQL
- Tools: GitHub, VS Code

SCOPE OF THE PROJECT

Applicable for:

- Schools
- Colleges
- Training institutes

Users:

- Admin
- Students
- Teacher/Training

Supports multiple operations:

- Record management
- Data analysis

An abstract, highly reflective metallic sculpture in shades of silver and grey, featuring complex, flowing, and interconnected forms that resemble liquid metal or organic structures. The sculpture is set against a solid black background, which makes the bright, reflective surfaces of the metal stand out. The lighting creates sharp highlights and deep shadows, emphasizing the three-dimensional quality and intricate details of the piece.

KEY FEATURES

- User Authentication (Login/Register)
- Student Record Management
- Attendance Management
- Marks & Grades Tracking
- Search & Filter Functionality
- Dashboard with summary

THANK YOU
